

The American Radio Relay League's investigations concerning Docket ET 03-104 must be considered in light of a lack of any credible scientific data to support approval of this docket. Also, Japan's own denial of BPL demonstrates the level of RF interference to services licensed to operate in the 2 MHz - 80 MHz frequency range and would greatly reduce transmissions that are vital in emergency situations. Approval of ET 03-104 would violate the FCC's on policy on non-interference. Please, do not proceed without further study in this matter. The power companies do not care about interference, only money. Thank you, R. Hill
